

Asta Powerproject Enterprise

Multi-User Construction Project Management Software

Asta Powerproject Enterprise delivers collaboration across programme plans by allowing a number of people to access and update a central repository of project data. Ideal for teams working within a single project or empowering visibility across multiple projects, with all updates synchronised in real-time.

As part of the scalable Asta Powerproject suite, the leading professional project management software for construction, Asta Powerproject Enterprise is a natural choice for organisations who are working on larger projects or those which need to balance resources and priorities across a portfolio of tasks.

“Using Asta Powerproject not only made the job of scheduling a much easier process but also meant we could consult more easily with the local council and communicate our plans to stakeholders”

Rob Owen, Mace Director, on the benefit of using Asta Powerproject Enterprise on the construction of The Shard

With Asta Powerproject Enterprise you can:

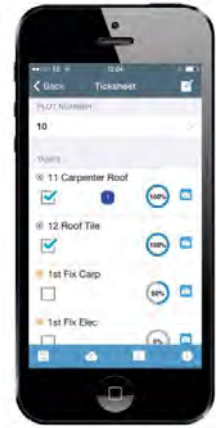

- ▶ Centrally manage all your projects for optimum efficiency
- ▶ Enable a number of people to access and work on the same project plan at the same time, empowering collaboration
- ▶ Allocate and track resources across multiple projects for enhanced productivity & utilisation
- ▶ Control project costs, income and cash flow across your portfolio
- ▶ Use Timesheets to capture resource effort against tasks
- ▶ Provide clients and senior management with vital management information via automated reports and dashboard views based on accurate, up-to-date data

Quick and easy progress reporting

Asta Powerproject Enterprise provides quick and easy progress reporting from site, by linking with Site Progress Mobile.

Site Progress Mobile is a downloadable app which enables mobile users to record the progress of tasks and repetitive events from a remote location against their work as scheduled in an Asta Powerproject project plan. Each user sees only the relevant tasks and progress check lists for which they are responsible.

Business Intelligence

A flexible system which allows you to generate high-quality dashboard reports of complex or multiple projects. These dashboard reports are ideal for providing management and clients with accurate, up-to-date information on any aspect of the project.

Enhanced collaboration throughout the BIM process

Asta Powerproject can now integrate 3D models into the planning process, to create a 4D schedule. Delivering relevant information to all involved in the BIM process is a key tenet, supported through the use of the Enterprise suite.

Open system for easy integration

With Asta Powerproject Enterprise holding project data in the central database (typically SQL Server or Oracle), this information can be made available to other systems via our application programming interface. Likewise, data from other business applications can be integrated into the Asta environment.

Expert support and training

Asta's experienced Professional Services team ensure that each Asta Powerproject Enterprise implementation is focused on your requirements – so that the processes, views and templates within the software actively support your workflow. Our Training Academy provides a wide range of training to help both new and more experienced users to improve their skills.

Specifically designed for planners

Asta Powerproject was specifically developed for the construction industry and has evolved over the years with ongoing input from our customers so that it is in tune with the way that planners work.

“With so many projects of varying sizes to manage, we use Asta Powerproject Enterprise throughout. It helps us foresee upcoming hurdles and although it can't fix the problem, it helps us to manage it and sometimes prevent it.”

Gavin Clegg, North Midland Construction
